Aims and Scope:
The journal publishes results of original research on both basic and clinical aspects of the developing nervous system, ranging from simpler nervous systems in invertebrates and *in vitro* growth of neural cells to regenerative processes under experimental and clinical conditions. Papers concerned with both *in vitro* and *in vivo* studies are invited for editorial consideration.

The journal will also publish original articles, editorials and reviews and communications from the International Society for Developmental Neuroscience covering all the latest developments in the field. Its main aims will be to facilitate the transfer of basic information to clinical applications and to promote an understanding of the fundamental mechanisms of neural growth and development.
